# Introduction

Thank you very much for purchasing Transcend's **JetFlash™**. This small device is designed to expedite the exchange of huge amounts of data between any desktop or notebook computer with a USB port. With a higher storage capacity and a much faster data transfer rates than other typical portable storage media, **JetFlash** can easily replace floppy diskettes and hard disks. In addition, its mobility, superior data retention ability, and impressive appearance will provide you with a brand-new data storage experience.

## Package Contents

The **JetFlash** package includes the following items:

- **JetFlash**
- Neck Strap
- Driver CD
- Quick Installation Guide

## Features

- Fully compatible with USB 2.0
- Easy Plug and Play installation
- PC-Lock Function: Makes **JetFlash** a key to your computer
- Boot-Up Function: Makes **JetFlash** a bootable device
- Partition & Security Function: Create a private partition with password protection
- Driverless (Only Windows® 98SE needs the enclosed driver)
- Powered via the USB port. No external power or battery needed
- LED indicates the usage status of the **JetFlash**

## System Requirements

- Hardware: Desktop or notebook computer with USB port
- Operating System: Windows® 98SE, Windows® Me, Windows® 2000 or Windows® XP  
Mac™ OS 9.0 or later, Linux™ Kernel 2.4.2 or later

## Driver Installation

### Driver Installation for Windows 98SE

1. Put the Driver CD into the CD-ROM drive (Auto-Run supported). Select the **Win98 Driver** button.

**WARNING!** Please ensure you install the driver before plugging in your **JetFlash™**.

2. Follow the on-screen instructions to complete the driver installation.
3. Plug your **JetFlash** into an available USB port. A new **Removable Disk** drive with a newly assigned drive letter will appear in the **My Computer** window.

### Driver Installation for Windows Me, 2000, and XP

No driver is required. These Windows operating systems have built-in drivers to support **JetFlash**. Simply plug **JetFlash** into an available USB port, and Windows will install the files needed to use your device. A new **Removable Disk** drive with a newly assigned drive letter will appear in the **My Computer** window.

### Driver Installation for Mac OS 9.0 or Later

No driver is required. Just plug **JetFlash** into an available USB port and your computer will automatically detect it. A new Disk icon will appear on the **Desktop**.

### Driver Installation for Linux Kernel 2.4.2 or Later

No driver is required. Just plug **JetFlash** into the USB port and mount it.

Example:

1. First create a directory for **JetFlash**  
`mkdir /mnt/jetflash`
2. Mount **JetFlash**  
`mount -a -t msdos /dev/sda1 /mnt/jetflash`

# Partition & Security Function

## Partition Types

You can partition **JetFlash** into two partition types. The two types are:

### Type 1: “Public Area Only”

This is the default partition type for **JetFlash**. It allows the entire volume of **JetFlash** memory to be accessed by anyone. No secure data area is established.

### Type 2: “Public and Security Area”

**JetFlash** is partitioned into a single Logical Unit Number (LUN) identified device, which contains a **Public Area** and a **Security Area**. Secure data can be established in the **Security Area**, which is protected by a password. Access to data in the **Public Area** is unrestricted.

1. Put the Driver CD into the CD-ROM drive (Auto-Run supported). Plug your **JetFlash** into an available USB port of your computer and select the **mFormat** button.

2. Select the **Partition** button in the **mFormat** window.

3. The following window will appear. Select **Yes** to continue or **No** to stop.

4. Select the partition type you need.

- a. To partition your **JetFlash** to the default type, i.e., "**Public Area Only.**" Choose the **Public Area Only**, and then select **OK**.
- b. To partition your **JetFlash** to "**Public and Private Area**" , select **Public and Private Area** and enter the memory sizes to be apportioned to the **Private Partition Area**.

- i. The minimum size apportioned to the **Private Partition Area** is 3MB, and the maximum cannot exceed or equal the **Total Storage Size**.
- ii. Key in a **New Password**. (Maximum size for a password is 8 characters.)
- iii. Key in a **Password Hint**, as a reminder in case you forget your password.
- iv. Select **OK**.

5. The following window will appear to warn you. Select **OK** to continue or **Cancel** to stop.

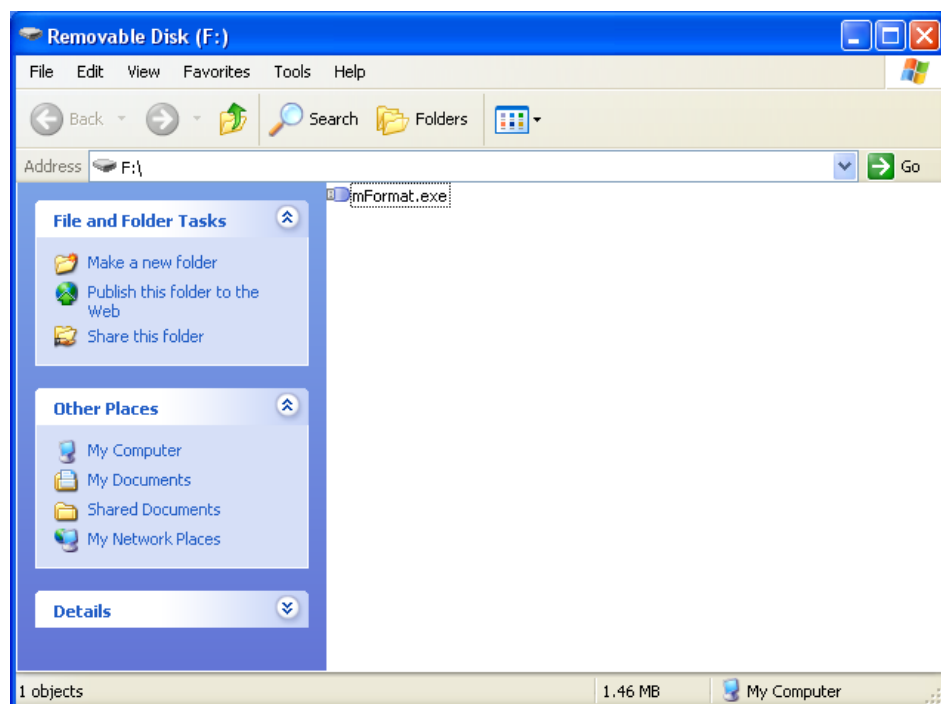

6. Once the partition is finished, the following window will appear. Select **OK**.

## Access Data in the Security Area

1. Plug in your **JetFlash** and double-click the **mFormat.EXE** in **JetFlash**. The icon  will appear in the system tray and the following **mFormat** window will appear.

- ❖ After the partition function is finished, the **mFormat.EXE** file will be copied to the **JetFlash**. Please do not delete it. You can execute the mFormat function without the Driver CD by running the **mFormat.EXE** on any computer.
2. Select the **Login/out** button in the **mFormat** window.

3. The following window will appear. Enter the correct password and select **OK**.

- ❖ If a **Password Hint** was set up during the partition procedure, you can select the **Hint** button to display your **Password Hint** to help you to remember the password.

4. The **Removable Disk** window will now appear and the **Security Area** is ready for use.

## Log Out of the Security Area

1. Make sure that all files are closed and that no data is being transferred to or from your **JetFlash**.
2. Click the **Login/out** button in the **mFormat** window. Once you have successfully completed the **Log Out** procedure for the **Security Area** of your **JetFlash**, only data in the **Public Area** will be accessible.

## Change Password

1. Select the **Login/out** button in the **mFormat** window.

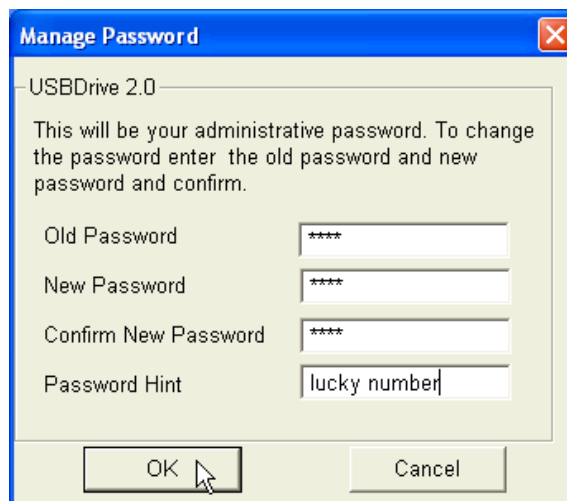

- The following window will appear. Select the **Manage Password** button.

- Input the **Old Password**, and **New Password** and the **Confirm New Password** in each field. (Maximum size for a password is 8 characters) You can also input a **Password Hint** to set up a reminder for your new password. Select **OK**.

- The following window appears. Select **OK** to close this window.

## If You Forget the Password

If you forget your password, you can use the password hint to remember it. If you cannot recall the password using the password hint, then all you can do is run the **Partition** function again to repartition your **JetFlash**. Unfortunately, all your “Private area” data will be lost during this procedure. You will have the chance to make a backup copy of your data in the “Public area” but all data in the “Private area” is permanently lost.

## PC-Lock Function

Once the PC-Lock function is enabled, you can use your **JetFlash** as a key to lock your computer, protecting it from being used by other users.

- ❖ The PC-Lock function is not supported in Mac or Linux Operating Systems.
- ❖ To use the PC-Lock function, you must login into the Windows OS with **Administrator** rights.

## PC-Lock Function for Windows 98SE, Me, 2000, and XP

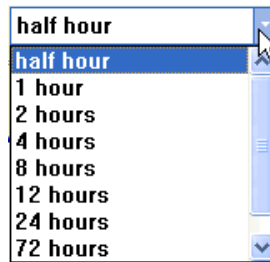

1. Select the **PC-Lock** button in the **mFormat** window.

2. The following window will appear.

3. In this window you can select the **Protect Time** you want, change the **PC-Lock hint** and the **Font**.

4. Select the **OK** button to enable the PC-Lock function. If you want to lock your computer after shutdown, you can select **OK & ShutDown**. You can remove your **JetFlash** when the computer is turned off.
5. The following message will appear to show that the PC-Lock function is enabled.

## Lock Your Computer

After the PC-Lock function is enabled, your computer will be locked whenever you remove your **JetFlash**. If your computer is locked, the screen will display the locked status as shown below.

## Unlock Your Computer

To unlock your computer, you must re-insert your **JetFlash**. The locked status on the screen will disappear and you are now free to use your computer.

- ❖ The computer's locked status will be relinquished automatically after the lock time has expired.

## Boot-Up Function

For systems that use Windows 98SE, Me, or XP, **JetFlash** can be configured to serve as an MS-DOS Boot Disk. Upon completion of this procedure, **JetFlash** can be used to boot-up your computer, allowing you to run MS-DOS programs. This does not make **JetFlash** a Rescue Disk for Windows, nor does it put Windows Startup files onto your **JetFlash**. After booting with **JetFlash**, if you wish to enter Windows, you must start Windows from your hard drive or a previously created Rescue Disk.

- ❖ The Boot-Up function is not supported in Windows 2000, Mac, or Linux Operating Systems.
- ❖ To use the Boot-Up function, you must login into the Windows OS with **Administrator** rights.
- ❖ If choosing to use the Boot-Up function, please be aware that there is a maximum capacity size

of 500MB (or less) apportioned to the Boot-Up disk sector; this applies to both the USB-ZIP and USB-HDD formats.

## System Requirements for the Boot-Up Function

- A desktop or notebook computer that supports **USB-ZIP** or **USB-HDD** as the **First Boot Device** in **BIOS**
- **Windows 98SE, Me, or XP** located on the C: drive
- Any anti-virus programs must be turned off

## Boot-Up Function for Windows 98SE and Me

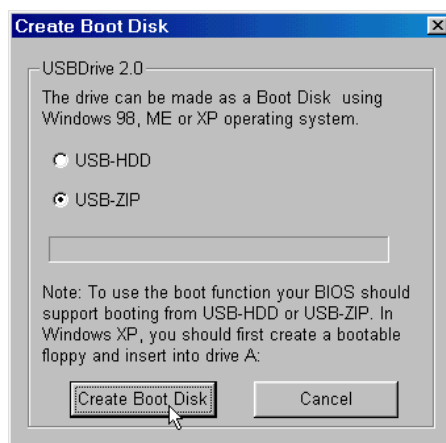

1. Select the **Boot-Up** button in the **mFormat** window.

2. The following window will appear. Select **Yes** to continue or **No** to stop

3. The following window will appear, choose the boot-up type you need (**USB HDD** or **USB ZIP**, whichever has been set as the **First Boot Device** in **BIOS**) and select **Create Boot Disk**.

❖ **USB-HDD** boot-up type is not supported in Windows Me.

4. The following message will appear. Select **OK** to continue or **Cancel** to exit.

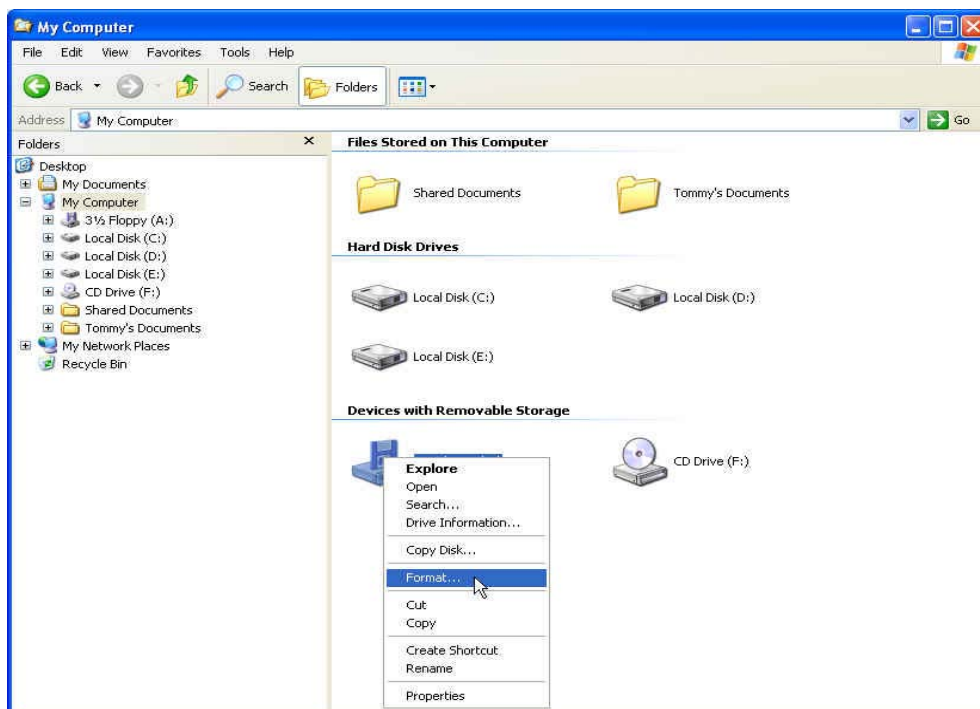

5. The following window will appear. **JetFlash** is now ready for use as an MS-DOS Boot Disk. Select **OK** to close the window.

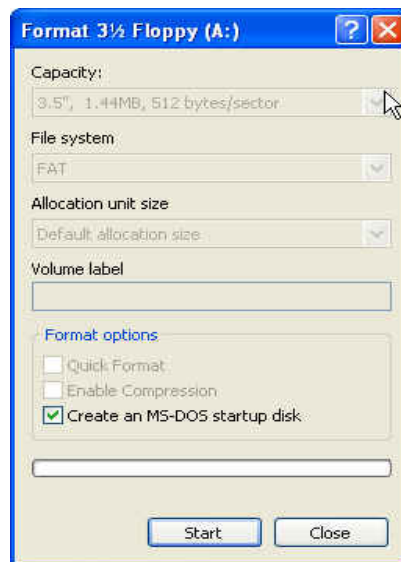

- ❖ When you have completed this process, your **JetFlash** will contain the files needed for the Boot-up function. Do not remove any of these files or else the Boot-Up function will fail.
- ❖ If **USB HDD** was selected, the **C:\>** prompt will appear after using the **JetFlash** to boot up. If **USB ZIP** was selected, the screen will show the **A:\>** prompt.

## Boot-Up Function for Windows XP

1. Insert a **new** floppy disk into the Floppy Disk Drive (A:). Go to the **My Computer** window and right click on the **Floppy Disk (A:)** icon. Select **Format...** from the pull-down menu.

2. Select **Create an MS-DOS Startup Disk** then select **Start**.

3. Select **OK**.

4. Select **OK** to complete the format.

5. Select the **Boot-Up** button in the **mFormat** window.

6. The following window will appear. Select **Yes** to continue or **No** to stop.

7. The **Create Boot Disk** window will appear. Select the **Create Boot Disk** button.

- ❖ The **USB-HDD** boot-up type is not supported in Windows XP.

8. The following message will appear. Select **OK** to continue or **Cancel** to exit.

9. The following window will appear. **JetFlash** is now ready for use as an MS-DOS Boot Disk. Select **OK** to close the window.

- ❖ When you have completed this process, JetFlash will contain the files needed to use the Boot-up function. Do not remove any of these files or else the Boot-Up function will fail.

## Remove mFormat

When the **mFormat.EXE** file is executed, the  icon remains in the system tray. If you do not want to use this mFormat anymore, right click the icon and select **exit** to remove the mFormat.

## Safely Remove Your JetFlash

### Remove JetFlash in Windows 98SE

Unplug **JetFlash** from your system directly when data is not transferring.

### Remove JetFlash in Windows Me, 2000, and XP

1. Select the  icon on the system tray.
2. The **Safely Remove Hardware** pop-up menu will appear. Select to continue.

3. Follow the on-screen instructions to complete the procedure.
4. The **Safe To Remove Hardware** message balloon will appear. **JetFlash** is now ready to be unplugged.

### Remove JetFlash in Mac OS

Drag and drop the Disk icon corresponding to your **JetFlash** into the trashcan. Then unplug your **JetFlash** from the USB port.

### Remove JetFlash in Linux

Unmount the device from the Linux environment.

Example: `umount /mnt/jetflash`

Before removing your **JetFlash**, please make sure the LED is **on** and **Not flashing!**

If you remove the **JetFlash** while the LED is flashing, unpredictable damage may occur to the files and/or to your **JetFlash** due to a write cache fault.

# Troubleshooting

If an error occurs, first check the points listed below before taking your JetFlash for repair. If you are unable to remedy a problem from the following hints, please consult your dealer or service center.

## Driver CD cannot auto-run in Windows

Enter **Device Manager** in the **Control Panel** and enable the **Auto-Insert** function for the CD-ROM drive. Alternatively, you can execute the **JetFlash.exe** file in the driver CD manually.

## Operating system cannot detect JetFlash

Check the following:

1. Is your **JetFlash** properly connected to the USB port? If not, unplug it and plug it in again.
2. Is your **JetFlash** connected to the Mac keyboard? If yes, unplug it and plug it into an available USB port on your Mac Desktop instead.
3. Is the USB port enabled? If not, refer the user's manual of your computer (or motherboard) to enable it.
4. Is the necessary driver installed? If your computer is equipped with Windows 98SE, you must insert the Driver CD into the CD-ROM and refer to the "**Driver Installation for Windows 98SE**" section to complete the driver installation before using your **JetFlash**.

## Boot-Up Function Error Messages

The initialization of the Boot-up Function or installation of the OS is probably incomplete. Please make sure that the path **C:\WINDOWS\COMMAND\EBD** exists in Windows 98SE, Me. If yes, return to step 1 to re-initialize the Boot-up function. If this fails, the Boot-up function is not supported by your computer operating system.

## Cannot find the file that was just copied to the JetFlash

Re-copy the file and refer to the "**Safely Remove Your JetFlash**" section to remove the **JetFlash** after the copy process is completed.

### **File that was just deleted still appears**

Re-delete the file and refer to the "**Safely Remove Your JetFlash**" section to remove the **JetFlash** after the delete process is completed.

### **mFormat (mFormat.EXE file) cannot be executed**

You must be logged in to the computer you are using with Administrator rights in order to use the **mFormat Utility**. If you want to access the security functions of your **JetFlash™**, you must execute the mFormat utility at least once.
